

I support RM-10352. I have been an amateur for 30 years and enjoy operating all the allowed ham bands. Most of band segments designated for different modes which makes for ease of operation. The sole exception of RM-10352 is to limit phone, image (SSB, AM and SSTV) to 1.843-2.000 MHz, which effectively protects an exclusive narrowband area below 1843 for CW and narrowband digital/data (PSK31, QRSS and whatever new narrowband digital modes may develop in the future). There has been a resurgence of interest in this band, especially during solar minima. Action on your part to separate wideband and narrowband modes now as requested would provide welcome relief to the Amateur Service and keep the band from becoming a free for all. Please implement RM-10352.

Mike Fulcher
